# RTI Grows to Record Sales Despite Market Uncertainty

Gothenburg, Sweden, July 9, 2025

RTI, a global leader in quality assurance (QA) solutions for diagnostic radiology, announces record-breaking product sales for June, the second quarter (Q2), and the first half (H1) of 2025. These achievements come despite ongoing global trade tensions and increased macroeconomic uncertainty.

The strong performance reflects sustained market momentum for RTI's leading product portfolio, driven by the increasing adoption of Mako, RTI's latest innovation in X-ray QA technology.

*"Our continued growth during the first half of 2025, despite challenging macroeconomic conditions, demonstrates that the market appreciates our commitment to innovation,"* said Elin Sahlberg, Chief Executive Officer of RTI. *"Both the Mako system and our advanced software and cloud-based solutions are being very well received by customers around the world."*

While the start of the second quarter saw cautious spending across the industry, June marked a significant rebound as deferred demand translated into strong order intake.

*"It is always frustrating when orders are delayed, but we had full confidence in our pipeline, and June proved us right. Product sales reached the highest level ever for the month of June, and it became the second-best month in RTI's history overall. We also report record sales for both Q2 and H1,"* Sahlberg added.

With Mako's growing global presence and the continued strength of RTI's software and cloud solutions, the company is well positioned for sustained long-term growth throughout 2025 and beyond.

## About RTI

RTI is a world-leading manufacturer of quality assurance (QA) solutions for diagnostic radiology. In 1981, RTI invented the first X-ray QA systems and since then, innovation has been at the heart of our corporate philosophy. Our comprehensive independent QA solutions allow medical physicists and service engineers across the world to ensure that X-ray units in all modalities are optimized and safe. RTI's X-Ray QA hardware and software are used by hospitals, manufacturers of X-ray equipment, service companies and government
